

PRADEEP SINGH BISHT

Senior Visual & Product Designer

India | Open to Relocation | Remote

9755987420 | bishtpradeep90@gmail.com | [Portfolio](#) | [LinkedIn](#)

I design interfaces that make people lean forward.

My best work happens at the intersection of visual craft and narrative — where typography, motion, and pacing come together to make a product feel like it has a point of view. At Amazon, I took a forgotten internal design platform and turned it into something 10,000+ people wanted to use — not by adding features, but by making the experience feel effortless, intentional, and a little bit surprising.

I want to bring that obsessiveness to entertainment. Stories deserve interfaces as compelling as the content inside them.

EXPERIENCE

Amazon — Senior Product Designer (UX Designer II)

Aug 2018 – Present | Hyderabad & Gurgaon, India

Lead end-to-end product design, visual systems, and storytelling for platforms serving global leadership audiences. Own everything from UX strategy to high-fidelity prototypes to front-end collaboration.

Caboodle — Brand & Creative Asset Platform

- Redesigned Amazon's brand asset platform from scratch — the system teams use to discover, customize, and deploy creative assets across campaigns and product surfaces.
- Drove adoption from 38% to 71% (+87%). The key? I stopped treating it like a tool and started treating it like a shopping experience — visual browsing, smart previews, contextual recommendations.
- Download completions hit 91%, passing 10,000+ unique downloads. Turns out people will finish what they start when the flow respects their time.
- Built a scalable visual framework: reusable patterns, token-based theming, self-service workflows that eliminated 60% of design team requests.

CS Discovery — Leadership Storytelling & Onboarding Platform

- Designed a content-forward experience for global leadership development — onboarding, capability building, and team toolkits delivered through narrative sequencing and progressive disclosure.
- Ran 100+ user interviews. Not surveys — actual conversations. That research shifted the platform from a document dump to a guided journey.
- Platform adoption moved from 54% to 61%. Toolkit downloads jumped 220%. Small numbers on paper; meaningful behavior change for a leadership audience that hates mandatory platforms.
- Created vision presentations and storytelling artifacts that helped leadership teams understand (and fund) what the product could become. Design as persuasion.

CREATIVE & MOTION WORK

- Designed animated interaction concepts for product vision videos — used After Effects and Figma prototyping to show stakeholders what "done" looks like before a single line of code ships.
- Applied cinematic pacing to product storytelling: typography reveals, transition choreography, and narrative sequencing that turned dry stakeholder presentations into something people watched twice.
- Created high-fidelity motion prototypes to validate micro-interactions — hover states, loading sequences, navigation transitions — then handed off frame-accurate specs to engineering.
- Built storytelling artifacts (pitch decks, concept videos, qual stimuli) that translated business goals into visual narratives leadership could rally behind.

TOOLS & CRAFT

Design & Systems: Figma (advanced), FigJam, Adobe Illustrator, Photoshop

Motion & Prototyping: After Effects, Figma Prototyping, Principle (learning)

Development: HTML, CSS, JavaScript, react — I speak engineer fluently enough to prototype in code and review implementations

AI Workflows: Midjourney, ChatGPT, Figma AI — for ideation acceleration, asset generation, and design exploration

Collaboration: Miro, Notion, Quip, Jira, Asana

EDUCATION

Bachelor of Engineering — Mechanical Engineering

Rajiv Gandhi Proudlyogiki Vishwavidyalaya (RGPV) | 2016
